To whom it may concern:

AGS Graffiti Protection AGS 3513

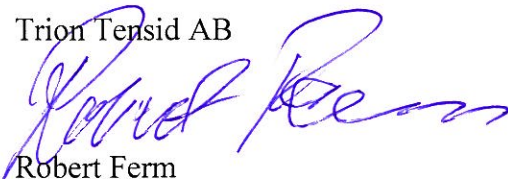

AGS 3513 is a new version replacing the older one AGS 3510.

In fact this is a modification of our product AGS 3512 with the difference that AGS 3513 gives a shiny surface while AGS 3512 gives a matt surface.

This change makes it possible to use the same references such as test reports and other documents now valid for both AGS 3512 and AGS 3513.

AGS 3513 will render into a surface as glossy/shiny as the outgoing AGS 3510.
Both AGS 3512 and AGS 3513 are to be used on either non porous or porous surfaces.
