

Graffiti Removal Made Easy

GraffStop® Self Release (SR) is a single pack, anti-graffiti coating system that is used to protect infrastructure from graffiti attack and provide easy removal of graffiti using only water.

GraffStop® SR can be easily applied by roller, brush or airless spray to porous and non porous surfaces.

Advantages include:

- Graffiti can be removed with water and a pressure washer
- A quicker clean with minimal costs
- No need for graffiti removal chemicals
- GraffStop® SR is guaranteed for 15 years before it needs to be recoated (No guarantee if applied by customer who hasn't undergone a training program)
- GraffStop® SR is not a sacrificial coating so only needs to be applied once every 15 years
- Prevents adhesion of fly posters
- Can be used on painted and metal surfaces. Some surfaces will need the use of a primer prior to application of SR
- Environmentally friendly
- GraffStop® SR is permeable so the substrate can breathe
- GraffStop® SR will stand up to most graffiti removal chemicals
- Can be colour matched to any surface.

GraffStop® SR is available in gloss and matt clear or coloured coatings. For a custom colour the minimum order quantity is 100 litres.

If you intend to use GraffStop® SR on porous concrete or brickwork, you need to use a sealant (Non darkening sealer). This reduces the porosity and stops the colour going darker.
